

Construction Management Software Releases Enhanced Version of its ProEst® Estimating Software

ProEst 11 incorporates a Microsoft Office look and feel and new technology to increase productivity and create more accurate bids

SAN DIEGO, Calif., May 22, 2007: Construction Management Software (CMS) today announced that it has released an enhanced version of its ProEst estimating software. ProEst 11 delivers new features and functionality designed to achieve greater estimating efficiencies while creating more accurate and competitive bids. Enhancements to ProEst 11 include an easier-to-use interface with a Microsoft Office look and feel; advanced integration capabilities; a new Bid Day module and digital takeoff technology.

“We’re excited to release ProEst 11 because it incorporates many innovations designed to improve and streamline our client’s estimating operations,” said Jeffrey Gerardi, president of CMS. “Not only is ProEst 11 more powerful than previous versions, it’s also more intuitive to use.”

Enhanced User Interface

ProEst 11 has an easier-to-use interface with a Microsoft® Office 2003 look and feel. This provides users with familiar toolbars and shortcuts for more intuitive navigation and faster access to key features. It also reduces training time for new users.
